

Participants in this workshop will need to download the following:

- Workshop [GitHub repository](#)
- All data will be accessed through public APIs and open source packages. These packages will be provided via Docker and/or venv. However, the interested participant might consider the following Python packages for exploration:
  - spacy
  - wikipedia
  - neo4j official Python driver
- We will be working with the [Google Knowledge Graph API](#). Users are permitted 100,000 calls per day for free to the API, but will require an API key for the API calls. Instructions on how to create the API key can be found [here](#).
